

Features of EMCO Permissions Audit

EMCO Permissions Audits is a luminous network permissions audit tool brought to you by EMCO Software. It has been developed while keeping in mind the permissions audit requirements of network administrators. As network administrators must have a detailed knowledge about their network including the details and precise information about the access control for their network resources i.e. which users have access to which network resources on a domain. And what type of access a certain user has on a specific network resource weather it's full, read only or change. So you need tool that can give you details information about the users on a domain, and what access level they have and on what resources in a most efficient and organized manner.

EMCO Software simulated all these requirements as well as some more advanced features in EMCO Permission Audit; an excellent tool to audit the permissions on all resources on a domain. It empowers network administrators to audit different permission base information on a domain.

EMCO Permissions Audit provides four different options to check the permissions on certain recourse.

- ✧ Direct Access Token
- ✧ Direct and Group Access Token
- ✧ Direct and Everyone Access Toke
- ✧ Access via Any Token

It organizes the information about the network resources and shows which users have access to which resources on a domain in an excellent manner. It allows users to export the audit data in a variety of file formats including HTML, PDF, JPEG and Excel etc.

EMCO Permission Audit has the ability to san available servers on a domain with just one click.

EMCO Permissions Audit is integrated with Ms. SQL Server, so giving you the ability to fully utilize the powers of one of the most efficient and secure database system available these days in the market. You can either use MS SQL Server Desktop Engine, a free tool by Microsoft or you can use Microsoft SQL Server depending on your requirements.

The main features of EMCO Permissions Audit are described below:

- ✧ **Scan domain for available servers with just one click**-EMCO Permissions Audit provides an easiest and fast one click scan options that discovers all available servers on a domain with just one mouse click.
- ✧ **Fetch a variety of permission based information from servers on a domain**-EMCO Permissions Audit collects a wide range of different information from all available servers on a domain. It collects information about all network resources and also tells which user has access to which resource.
- ✧ **No need to install any client software on remote machines**-EMCO Permissions Audit doesn't requires any client side tool to be installed on the remote machine.
- ✧ **Nicely organized information in online reports**-EMCO Permissions Audit organizes all scanned information in a very nice and brilliant manner for an efficient and quick reference.
- ✧ **Export the scanned data to a variety of file formats**-EMCO Permissions Audit allows you to export the scanned data to a variety of file formats including HTML, PDF, Excel, JPEG, etc. So, you can save the scanned information in required file format on your hard disk.
- ✧ **Easy Integration with MS SQL Server**-EMCO Permissions audit can easily integrated with MS SQL Server. So all scanned data is stored in a reliable and efficient database.
- ✧ **See information based on user access**-EMCO Permissions Audit enables you to select and show the information based on the user access on different resources on a domain. So information is organized in a way that it shows that which users have access to which resources.
- ✧ **See information based on resource access**- EMCO Permissions Audit enables you to select and show the information based on the resource access i.e. it shows information organized resource wise and shows which resources can be access by which users.
- ✧ **Show access to shares in available resources**-EMCO Permissions audit shows the access level of different users on different available shares on a domain. And shows which users have what type of access on which share.
- ✧ **Show access to folders in available resources**- EMCO Permissions audit shows the access level of different users on different available folders on a domain. And shows which users have what type of access on which folder.

- ✧ **Show information about all or selected user**-EMCO Permissions Audit allows you to see the information about the all users or any of the selected users from the users drop down list.
- ✧ **Show access through Direct Access Token**-EMCO Permissions Audit allows you to select to show the information about the users who have access through direct access token on different resources on a domain.
- ✧ **Show access through Direct and Group Access Token**- EMCO Permissions Audit allows you to select to show the information about the users who have access through direct and group access token on different resources on a domain.
- ✧ **Show access through Direct and Everyone Access Token**- EMCO Permissions Audit allows you to select to show the information about the users who have access through direct and everyone access token on different resources on a domain.
- ✧ **Show access through Access via Any Token**- EMCO Permissions Audit allows you to select to show the information about the users who have access through any access token on different resources on a domain.
- ✧ **Option to exclude selected groups**-EMCO Permissions Audit enables you to exclude certain groups during the scan operation.
- ✧ **Show information about all or selected shared resource**-EMCO Permissions Audit allows you to select to show information about all or any of the selected resource on a domain.
- ✧ **Very low network load**-EMCO Permissions Audit doesn't puts too much load on your network to worry about.
- ✧ **Fast and silent execution**- EMCO Permissions Audit scans all machines in a fast and efficient manner and best of all is it is silent and the remote user never know what's happening to his system.
