

## Show User Access on different resources in Permissions Audit

EMCO Permissions Audit allows you to see which users have access to which resources and what type of access a certain user have on a specific resource on a domain.

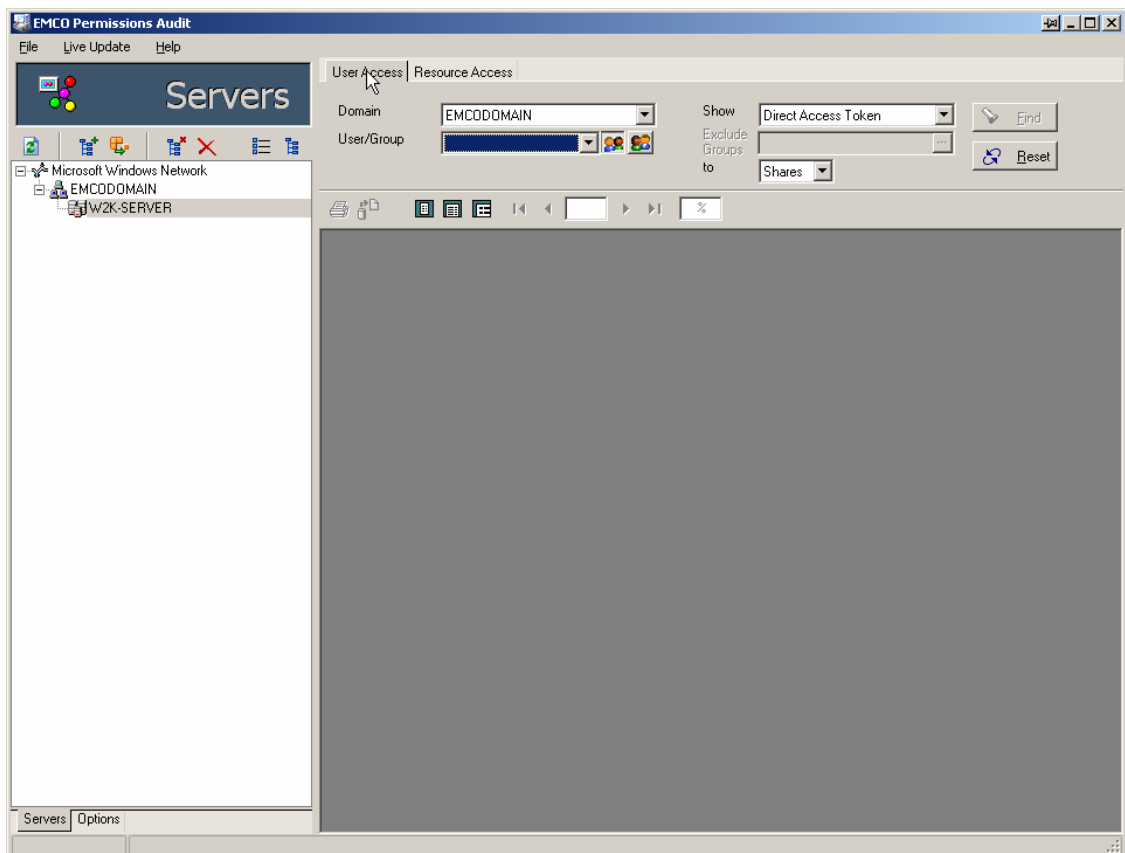

EMCO Permissions Audit provides four different options to check the permissions on certain resource.

- ✧ Direct Access Token
- ✧ Direct and Group Access Token
- ✧ Direct and Everyone Access Token
- ✧ Access via Any Token

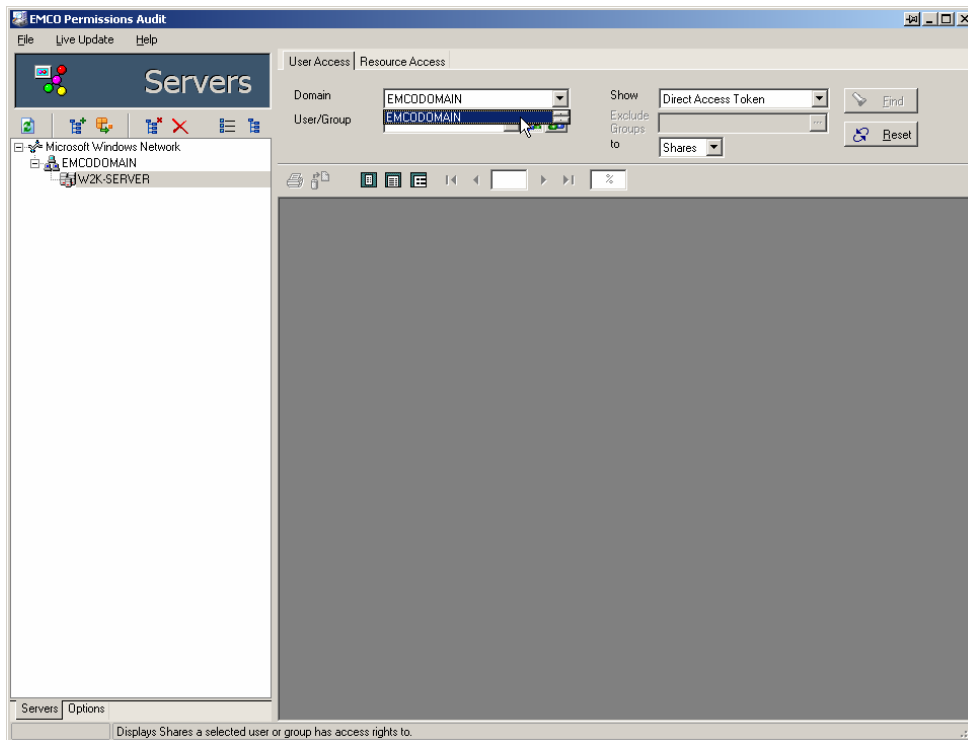

### To see the user access on different resources on a domain:

To see the user access on different resources on a domain in EMC Permissions Audit, perform the following steps:

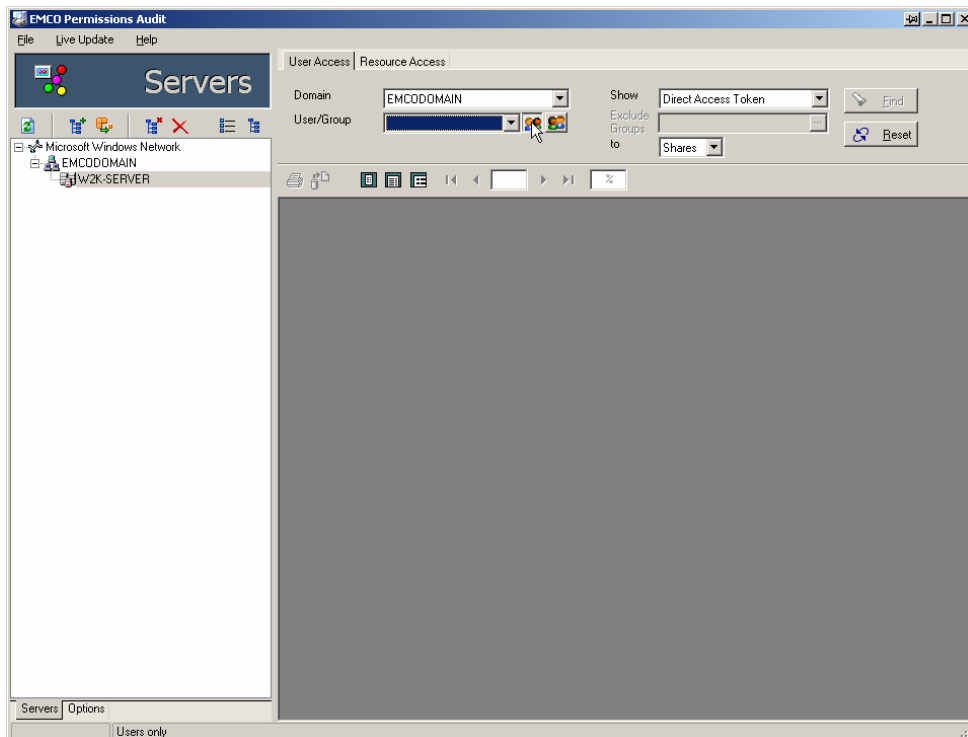

1. Switch to **User Access** Tab.

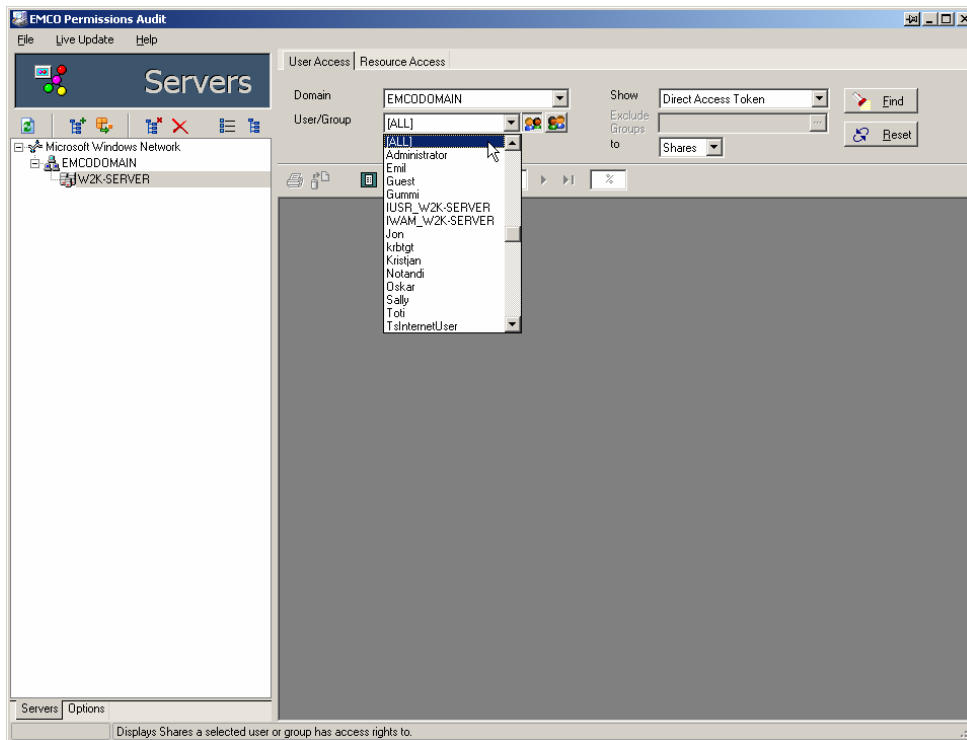

2. Select the required domain name from the **Domain** dropdown list.

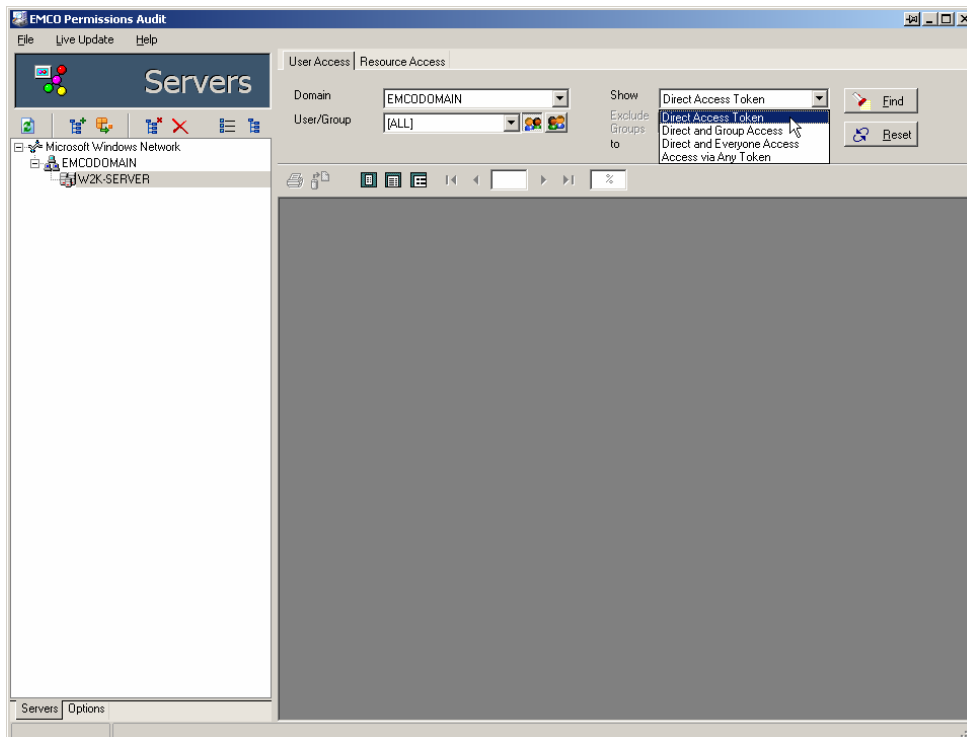

3. Select either **User only** or **Group Only** as per your requirements.

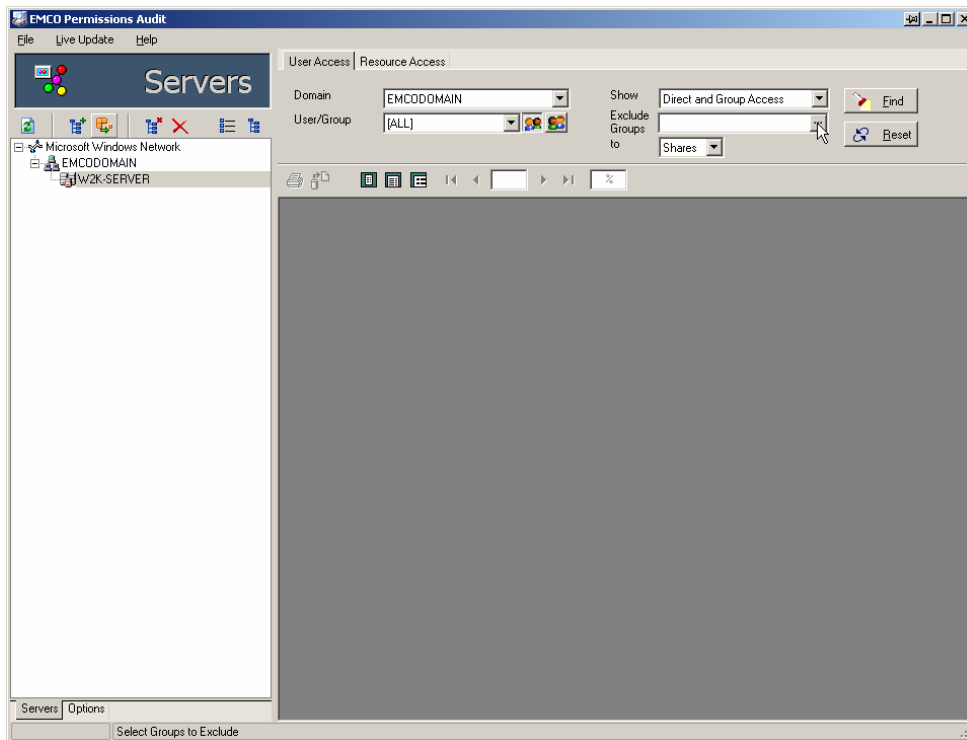

4. Select the required **users/groups** from the dropdown list.

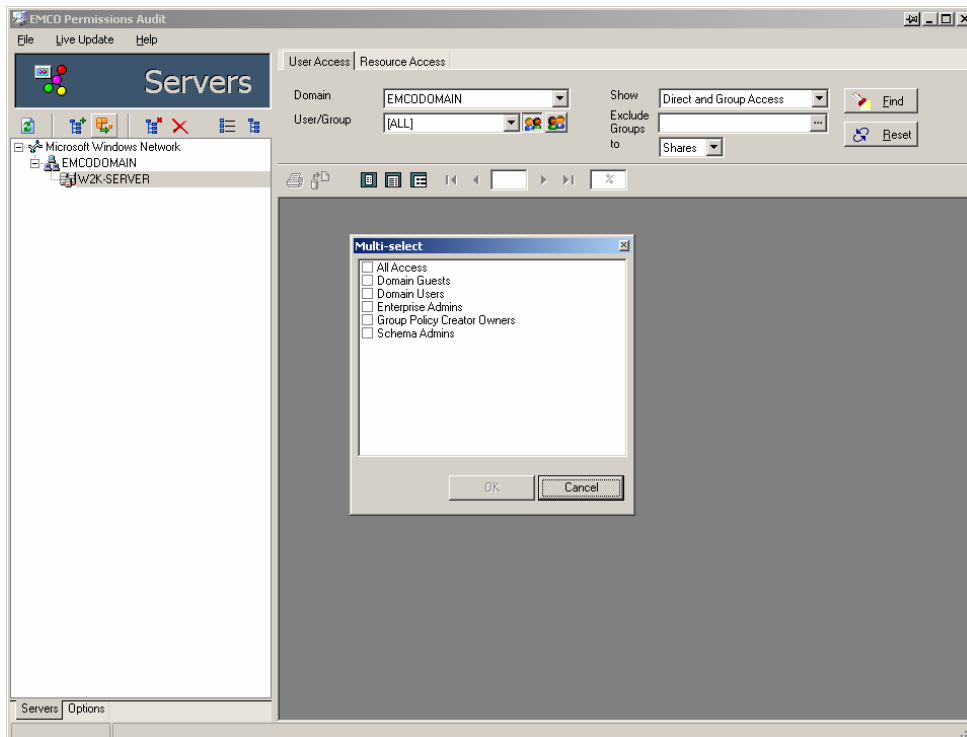

5. Select the required **access type** from the dropdown list.

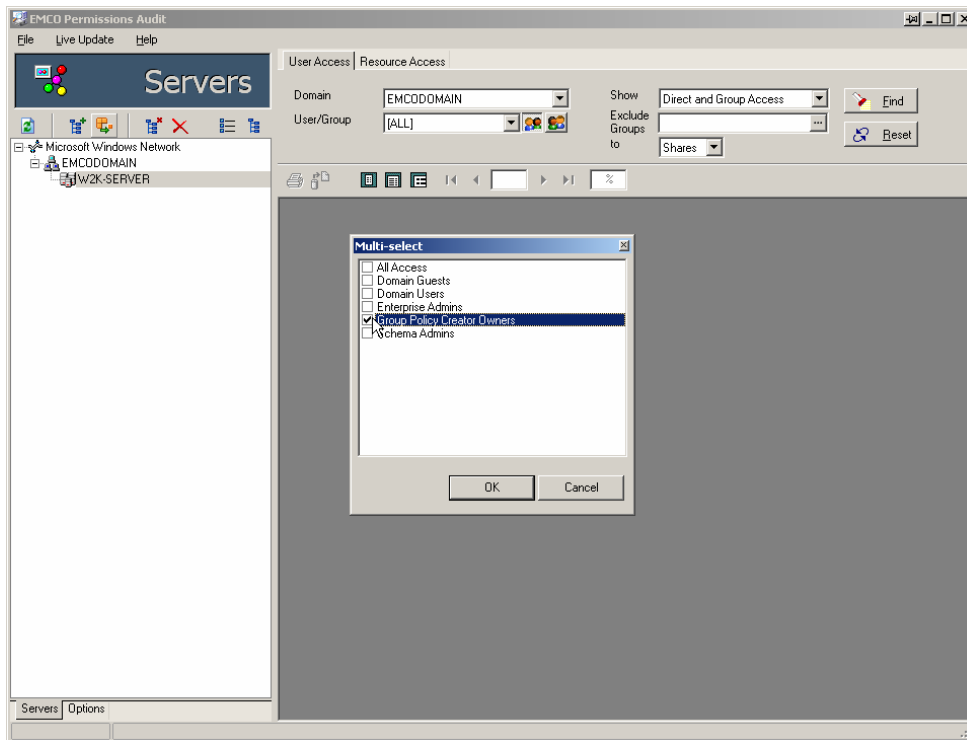

6. To exclude groups click the **Exclude Group** button.

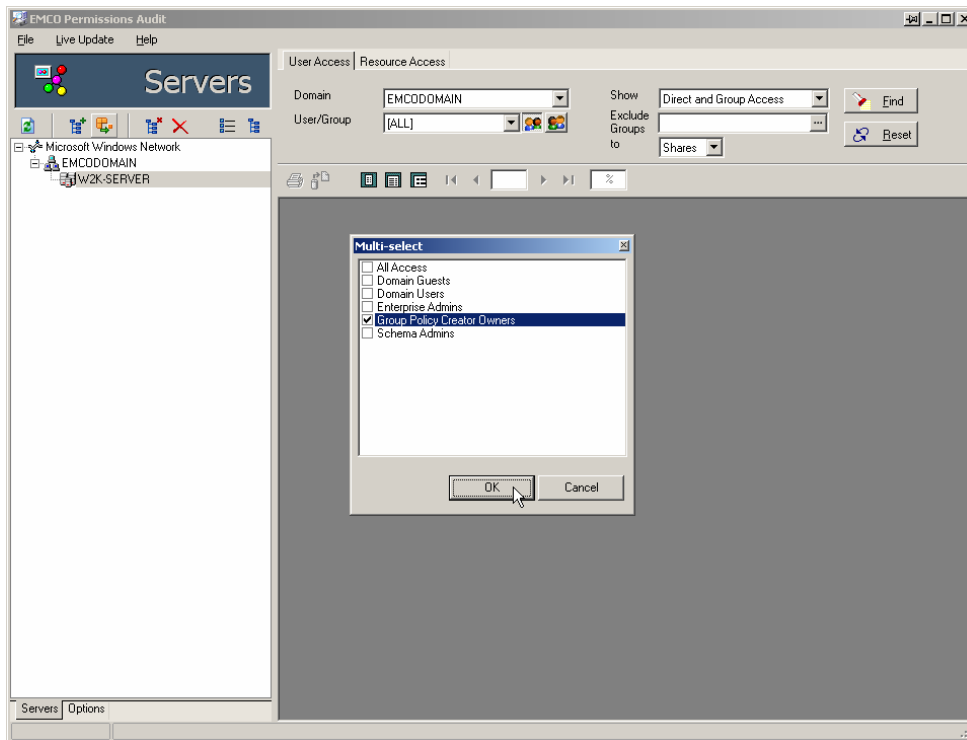

7. **Multi Select** dialog box will appear.

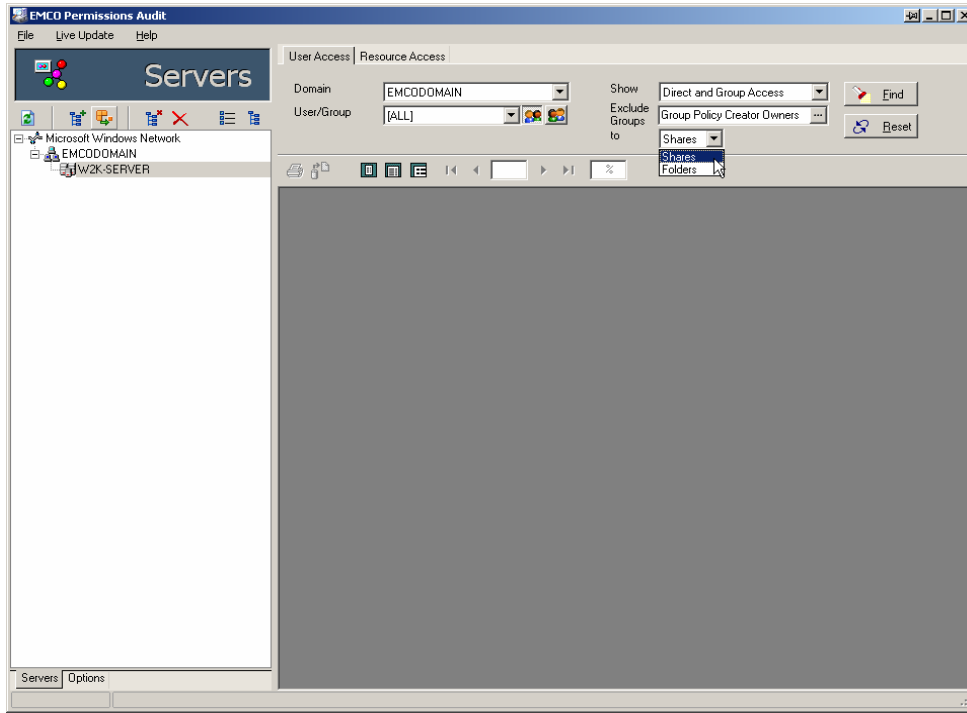

8. Check the required options from the list.

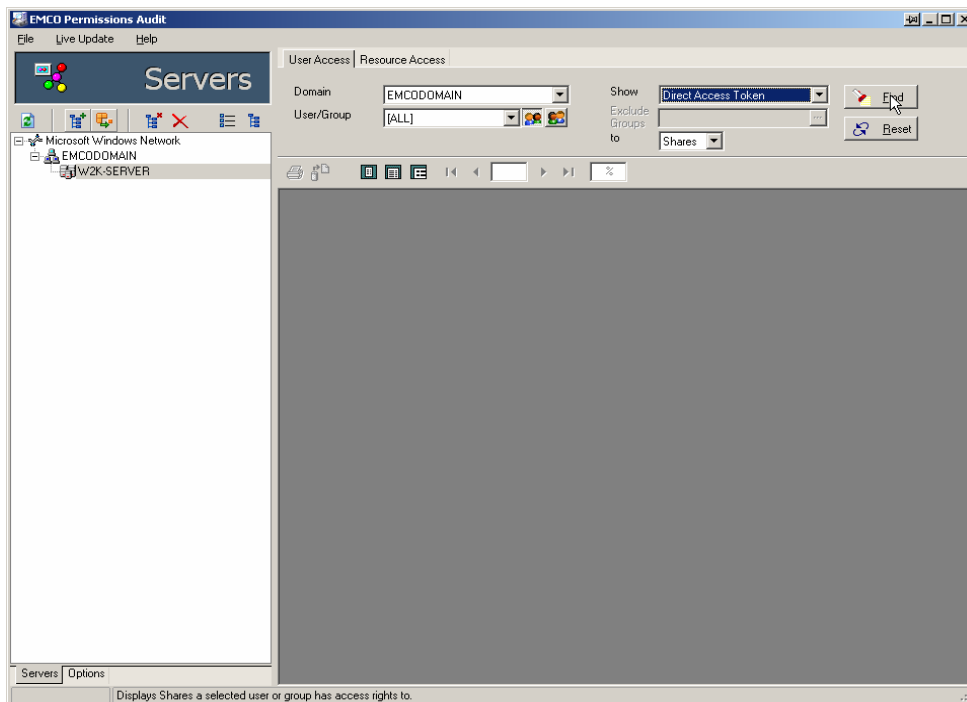

9. Click **OK** button.

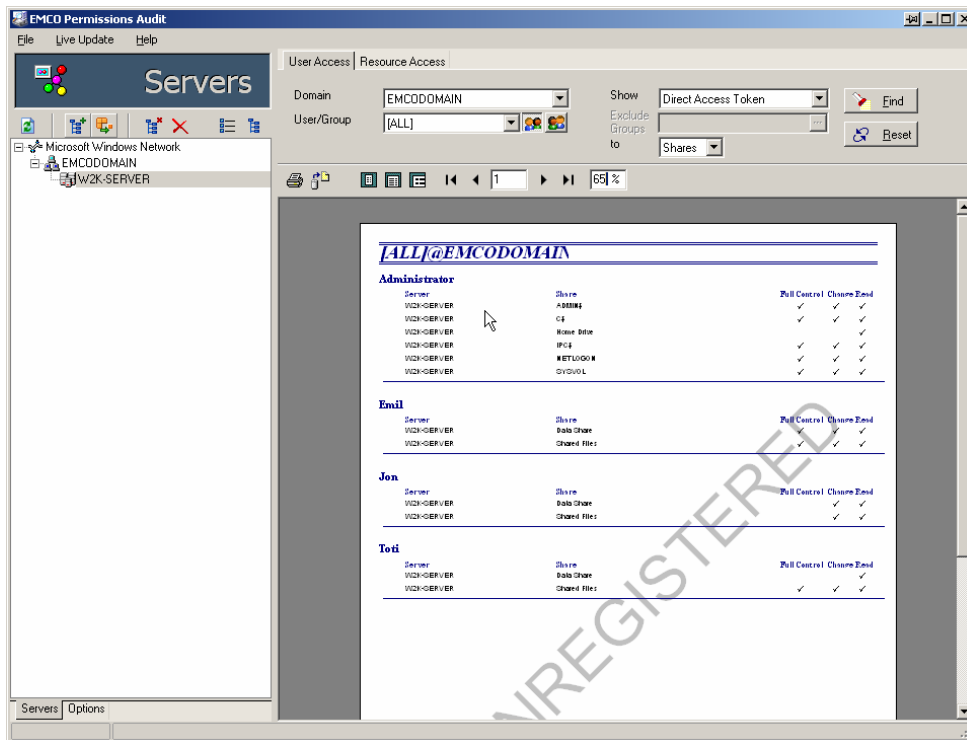

10. Select whether you want to exclude from **Shares** or **Folders** from the dropdown list.

11. Click **Find** button to see the selected information.

12. The selected information will appear below.

13. You can now export this information to a file on your hard disk in selected format if required.
