

Permissions Audit XML Features

New and improved EMCO Permissions Audit XML addition now comes up in a completely different look that makes it a more effective part of a network administrator's toolkit.

One of the tasks from a network administrator's to-do list is to keep an eye on the permissions for network shares and folders not only this but also to set them such that only authorized users have access to sensitive data; and for a large scale networks, it's not quiet an easy task.

EMCO Permissions Audit XML Edition provides a few clicks access to all tasks related to the management of permissions on different network resources.

The main features of EMCO Permissions Audit XML Edition are described below:

- ✧ Scan different domain/workgroups for all available servers with just a single mouse click
- ✧ Fetch a variety of permission based information from servers on a domain
- ✧ No need to install any client software on remote machines.
- ✧ All fetched information is organized in a new and nice look
- ✧ Generate on screen reports for the fetched data
- ✧ Print your reports
- ✧ Fetch data based on user access
- ✧ Fetch data based on resource access
- ✧ Show access to folders in available resources
- ✧ Show information about all or selected user
- ✧ Filter fetched information about shares
- ✧ Filter fetched information about folders
- ✧ Compare different share scans data
- ✧ Compare different folder scans data
- ✧ Define Alternate Credential to perform scan operations
- ✧ Fetch information about available users and groups with just a single click of mouse
- ✧ Set permissions for share on local and remote machines
- ✧ Set permissions for folders on local and remote machines
- ✧ Very low network load.

Now we will discuss each of the above mentioned features in detail:

- ✧ **Scan domain/workgroups for available servers with just a single mouse click:**
EMCO Permissions Audit XML Edition provides an easiest and fast one click scan options that discovers all available servers on a domain with just a single mouse click.
- ✧ **Fetch a variety of permission based information from servers on a domain:**
EMCO Permissions Audit XML Edition collects a wide range of security related information from all available servers and client machines on a domain and workgroup. It collects information about all network resources and also tells which user has access to which resource.
- ✧ **No need to install any client software on remote machines:**
EMCO Permissions Audit XML Edition doesn't require any client side tool or component to be installed on the remote machine; making it an independent and more effective tool.
- ✧ **All information organized in a new and nice look:**
New EMCO Permissions Audit XML Edition organizes all scanned information in a very nice and more effective way for an efficient and quick reference.
- ✧ **Generate on screen reports for the fetched data:**
EMCO Permissions Audit XML Edition allows you to generate on screen reports based on the scanned information from different machines; in a new and more effective manner.
- ✧ **Fetch data based on user access:**
EMCO Permissions Audit XML Edition enables you to select and show the information based on the user access on different resources on a domain. So, the information is organized in a way that makes it easy to see that which users have access to which resources.
- ✧ **Fetch data based on resource access:**
EMCO Permissions Audit XML Edition enables you to fetch the information based on the resource access i.e. it shows information organized resource wise and shows which resources can be access by which users.
- ✧ **Fetch data based on access to shares in available resources:**
EMCO Permissions Audit XML Edition shows the access level of different users on different available shares on a domain. And shows which users have what type of access on which share.

- ✦ **Show access to folders in available resources:**
EMCO Permissions Audit XML Edition shows the access level of different users on different available folders on a domain. And shows which users have what type of access on which folder.

- ✦ **Show information about all or selected user:**
EMCO Permissions Audit XML Edition allows you to see the information about the all users or any of the selected users from the users drop down list.

- ✦ **Show access through Direct Access Token:**
EMCO Permissions Audit XML Edition allows you to select to show the information about the users who have access through direct access token on different resources on a domain.

- ✦ **Show access through Direct and Group Access Token:**
EMCO Permissions Audit XML Edition allows you to select to show the information about the users who have access through direct and group access token on different resources on a domain.

- ✦ **Show access through Direct and Everyone Access Token:**
EMCO Permissions Audit XML Edition allows you to select to show the information about the users who have access through direct and everyone access token on different resources on a domain.

- ✦ **Show access through Access via Any Token:**
EMCO Permissions Audit XML Edition allows you to select to show the information about the users who have access through any access token on different resources on a domain.

- ✦ **Very low network load:**
EMCO Permissions Audit XML Edition is a light weight tool that doesn't put too much load on your network to worry about.

- ✦ **Fast and silent execution:**
EMCO Permissions Audit XML Edition scans all machines in a fast and efficient manner and best of all is it is silent and the remote user never know if some information is being fetched by .
