

EMCO Remote Screenshot

Capture a Screenshot of Any Remote Desktop in Local Network

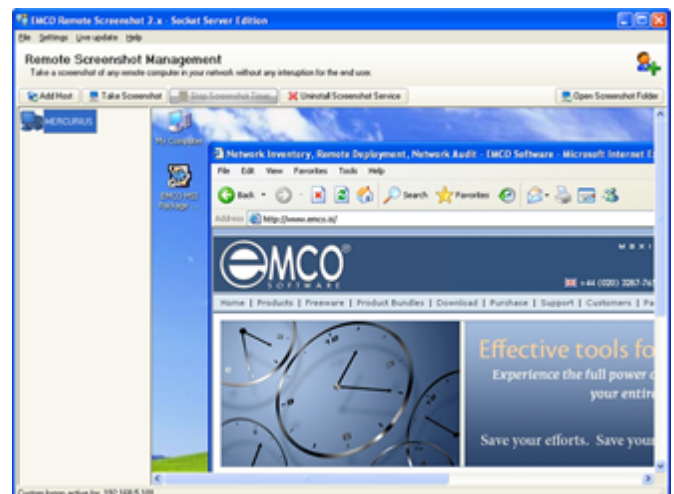

An intuitive tool allowing you to discreetly view the activity of a remote user on any desktop of your network easily. You can take screenshots of the remote machines on your network and save them to a file on your local computer. Application can be configured to automatically capture screenshots from the remote machines after a specified period of time and saving them to files in a variety of image formats.

Sometimes you need to have an access to remote PC in order to check what's going on it. For example, you need to ensure that PC just works or to check that users follow organization policies and don't use their desktops in inappropriate way. In many similar cases usage of standard Windows Remote Desktop is limited because of technical reasons, while utilizing or commercial remote desktop tools is too expensive.

EMCO Remote Screenshot was designed to be a cost-effective solution for cases when you need to have non-interactive access to remote PCs. Using this easy utility you can take screenshots silently and invisible for remote users from remote PCs either in manual or automatic mode to improve security or your system and prevent inappropriate activity.

Awards

Year after year, EMCO Remote Screenshot receives various awards from editors and readers of leading IT resources. These awards are acknowledgement of the advanced product design, good usability and our commitment to quality.

Advantages and Benefits

Following is a list of top advantages and unique features that distinguish the product among others on the market. Take a look how you can use product features in your day-to-day work and what benefits you can get from it.

Know More About Your Employees, Students or Network Users

Do you know how a workday looks for your employees or students and what they do on their desktops? What can you change so that it is no more a secret for you? Ability to silently check what any particular person does on his/her PC at any time gives you big opportunities to improve your business effectiveness and, more importantly, a better understanding of your staff. With no words and high expenses for HR consultants, you can easily understand who is the best team player, who is overloaded by the work and who is idling around. Moreover, the mere fact of being watched disciplines your employees without the harassment associated with a full-scale video system that records everything.

Make Silent Monitoring

Any monitoring system is effective only if it works in silent mode and doesn't have influence on the process. EMCO Remote Screenshot works accordingly with this rule to guarantee that you get an objective vision of the actual processes. Stealth mechanism, used to take screenshots and transmit them to application, prevents detection of the fact that desktop is monitored.

Store Screenshots Archive for Further Reference

EMCO Remote Screenshot follows the common practice for security system and stores all captured screenshots as files on hard drive for further reference. If required, you can easily find required screenshot in the archive. This feature gives you very powerful arguments for discussion with your staff, because you can refer not only your assumptions, but the real facts as screenshots. Sure, screenshots archive can't be used only to catch your employees; it can be effectively utilized for usability research or security improvements.

Get an Access to Any PC in the Domain or Workgroup

Unlike other monitoring tools EMCO Remote Screenshot can operate both in domains and workgroups. You don't need to apply any special settings on remote PCs and install any client software manually. All what you need to connect to remote PCs - just to have an administrative access to them. If your current account doesn't have such access, you can set specific credentials for every PC.

Save Costs to Launch Effective Monitoring System

If your goal is utilize desktops monitoring tool to track activity of remote users, you can save a lot of costs if you choose EMCO Remote Screenshot. Similar functionality is provided by remote desktop clients, for example, EMCO Remote Desktop Professional, but such solutions are much more complicated and expensive and if you don't need to use all of their features, there is no sense to pay more.
