Adding File Search Conditions in Remote Installer

To Add File Search Conditions perform the following steps:

1. Click Add Condition button in the File System Search Conditions tool bar.

2. Add Search Condition dialog appears on the screen.
3. Select the required file.

4. Press Add button.

5. The added File condition appears in the File System Search Conditions list.

The screenshot shows the EMCO Remote Installer interface. On the left is a 'Machine Tree' showing a network structure with folders like 'DEV', 'DREAMLIGHT', 'EMCO', 'LAB', and 'TYRONE', each containing various computer models. The main window is titled 'Computer's Scans - Scan Conditions - Log' and has three tabs: 'Computer's Scans', 'Scan Conditions', and 'Log'. The 'Scan Conditions' tab is active and contains two sections:

- Applications:** A table with columns 'Application Name', 'Version', and 'Application Comment'. It contains one entry: 'Adobe Reader 9' with a version of 'bvnvcvbnvcvbn'.
- File System Search Conditions:** A section with a 'File System Path' field containing 'C:\Program Files (x86)\Adobe\Reader 9.0\Reader\AcroRd32.exe'.
- Registry Search Conditions:** An empty table with columns 'Root Key', 'Registry Path', 'Value', 'Type', and 'Data'.
