Install Remote Shutdown Pro service manually

# Install EMCO Remote Shutdown service manually

ⓘ   The service can be used only with Professional edition

In this document the manual installation of the EMCOShutdownServer.exe from the command prompt is described.

The Process:

Firstly, install the EMCO Remote Shutdown Professional software from EMCO to any computer. The software will be installed on default to: %programfiles%\EMCO\Remote Shutdown Professional. After the installation, all files that are required for the manual installation will be available.

1. Copy the EMCOShutdownServer.exe from the installation directory to the remote computer's System32 directory, or to the computer on which the service will be installed.

2. Next, run the Cmd.exe from the remote computer or from the computer on which the EMCOShutdownServer service was manually installed.

3. At the command prompt, type EMCOShutdownServer.exe install. Hit the Enter key.

```
C:\Windows\system32\cmd.exe

c:\Windows\System32>EMCOShutdownServer.exe install_
```

4. Other commands to work with EMCORemoteShutdownServer listed in the dialog window, shown if EMCOShutdownServer.exe started without any arguments.

```
Information

Usage:  [install {port} | start | stop | remove | port]

                                    OK
```
